

Conclusions Transnational Workshop

November 16th, Paris

Veerle Labeeuw

Project Manager CityChlor

Integrated Approach

CityChlor aims to improve the quality and minimize the pollution of soil and groundwater by developing an **integrated approach** to tackle the threats caused by contamination with chlorinated solvents in urban areas.

The integrated approach combines following aspects – depending on area, site and context:

- socio-economical (like urban development, communication, financial and legal aspects),
- techniques,
- time,
- space,
- environment and
- actors (active & passive).
